

PokéMAPs

A daily location-guessing puzzle played on the Pokémon games' own town maps — six escalating hints, direction-only feedback, one answer a day across five regions.

Know the name? Search it...

Guesses

01 Ever Grande City

02 Route 101

03

04

Wordle × GeoGuessr — on the games' own town maps.

Every day, one hidden location somewhere in the Pokémon world. You don't type a word — you tap the actual pixel town map. Wrong guesses answer back, and the hint ladder drops another rung.

01

TAP THE MAP

A guess is a place, not a word — every location is a click region on the real in-game map.

02

DIRECTION + HEAT

Feedback is an 8-way arrow and a warmth band. Never a number.

03

THE LADDER DROPS

Each miss unlocks a broader hint, from habitat classification down to a photograph.

Field guide, turned up.

The interface plays a naturalist's survey kit: white pages, ink outlines, huge rounded type with the DS-menu energy of the games themselves. The chrome never competes with the pixel maps — it frames them.

DIRECTION + HEAT, NEVER DISTANCE

INK ON WHITE

Panels are white with 2.5px ink outlines and hard un-blurred drop shadows — menu boxes you could pick up.

SEMANTIC COLOR ONLY

Color appears only as information: proximity bands and one interactive blue. The pixel maps carry all the rest.

LOUD TYPE, QUIET LABELS

M PLUS Rounded 1c at display sizes does the talking; IBM Plex Mono survey labels whisper in the margins.

One face for everything. Color as data.

M PLUS ROUNDED 1C — DISPLAY & BODY

AaBbCcDdEeFfGg 0123456789

The quick brown Zigzagoon jumps over the lazy Snorlax.

IBM PLEX MONO — SURVEY LABELS

DAILY LOCATION PUZZLE · N° 214 · RUN 07

WHY THIS FACE

M PLUS Rounded 1c is the free relative of FOT-NewRodin — the rounded face the games themselves use. IBM Plex Mono plays the instrument-panel labels.

INK

#17130C · chrome & type

INTERACTIVE

#0D7FBF · the one blue

HIT

#1CA35E · found it

WARM

#E0A800 · getting close

MID

#E2711D · in the region

COLD

#D94A4A · far away

Band colors are the game's information — the warmth of a guess. Nothing else in the chrome is allowed to have color.

Six hints, hardest first — priced in Poké Balls.

Rarer ball, bigger giveaway. The opener asks you to reason from habitat; the Master Ball simply shows you the place.

01

CLASSIFICATION

terrain and habitat chips only

02

FIELD AUDIO

every wild cry recorded in the area

03

OVERHEARD

a real NPC line — in-game class and name

04

WILD SPRITES

encounters, in that generation's own pixels

05

TOWN-MAP NOTE

the games' own map description

06

PHOTOGRAPH

an in-game screenshot, unblurred at the end

10 WILD CRIES RECORDED HERE · REPLAY FREELY

03 OVERHEARD

"The sandstorm never quits in the desert stretch. You'll need special goggles to enter."

— CAMPER

04 WILD SPRITES

Sandshrew

Trapinch

Goldeen

05 TOWN-MAP NOTE

AFTER GUESS 4

06 PHOTOGRAPH

AFTER GUESS 5

Never a number.

A wrong guess answers with an 8-way arrow and a warmth band — enough to navigate by, never enough to triangulate with. Distance is computed internally in map tiles and stays there.

- HIT** found it — the star
- WARM** a few tiles out
- MID** same corner of the map
- COLD** wrong side of the region

373 locations, zero runtime calls.

Everything is pulled, scraped, extracted, and verified at build time — then shipped as one static bundle. The live game never talks to a third party.

01

POKÉAPI

encounter tables and cries,
filtered per pack to era-correct
game versions

02

BULBAPEDIA

trainer rosters, the games'
own map descriptions, in-
game screenshots — never
anime art

03

EXTRACTION

click regions read from the
games' highlight maps —
three computer-vision
methods across five
generations

04

COVERAGE GATE

the build fails if any location
can't fill its hint ladder — no
half-authored puzzles ship

05

STATIC BUNDLE

no backend, no accounts;
state lives in localStorage on
your device

3

extraction methods — ring detection, dot
colors, palette-cluster diff

5

sprite eras — a Sandshrew in Hoenn looks
like 2003

0

API calls at runtime — everything bundled,
attributed, takedown-ready

Five regions, one daily schedule.

Sinnoh

67 LOCATIONS · D/P/PT

Johto & Kanto

99 LOCATIONS · HGSS

Hoenn

76 LOCATIONS · R/S/E

Unova

77 LOCATIONS · BW + B2W2

Kalos

54 LOCATIONS · XY

Each pack ships its own era's sprites, cries, and screenshots — the region looks and sounds like its generation.

Streaks as a gym gauntlet.

A daily streak climbs Sinnoh's gym-leader ladder — Roark travels with you at streak 1, Cynthia waits at the summit. Practice mode keeps its own run, per region or across every pack, and ends with a shareable result instead of a scold.

THE GAUNTLET — COMPANIONS BY STREAK

PRACTICE — EVERY REGION, ITS OWN RUN

The values are visible in the interface.

NEVER MONETIZED

No ads, no donations, no upsell. A fan project stays a fan project — the IP posture depends on it.

NO ACCOUNTS, NO BACKEND

The app is static files. Your streak lives in your browser's localStorage and nowhere else.

DETERMINISTIC DAYS

Same date, same puzzle, same hint picks, worldwide. There is no randomness in the daily path.

QUIET ANALYTICS

No cookies, no tracking — anonymous page counts only, disclosed in the footer next to the attributions.
